

Sporo Health Inc. Becomes an athenahealth Solution Partner, now available in the athenahealth Marketplace

Sporo Health brings automated, bidirectional Google Calendar sync to the athenahealth network, helping clinicians reclaim time, reduce scheduling errors, and focus on patients instead of logistics

Austin, TX – August 19, 2026 – Sporo Health today announced it has joined athenahealth's Partner Community as a Solution Partner. Its automatic calendar synchronization scheduling is now available in the athenahealth Marketplace, providing access to athenahealth's growing network of healthcare providers. The new integration eliminates the daily friction of managing two calendars.

Sporo Health's HIPAA Compliant, bidirectional calendar integration delivers:

- A near real time two-way sync between athenahealth and Google Calendar
- A single unified view of every appointment, meeting, and commitment in one place
- Minimized amount of scheduling errors by eliminating double-booking and missed updates

"Sporo Health enables a two-way connection between athenahealth scheduling and Google Calendar for clinicians that struggle keeping up with both their personal and professional calendars." said Kimon Vogt, Founder and CEO of Sporo Health. "Our first doctor used to spend 1 hour a day checking both his athenahealth scheduling and his Google Calendar, ensuring that both reflected the same schedule. Even then, some appointments slipped through the cracks, causing double-booking, the booking of a professional and personal appointment at the same time, and costing his organization time and money. Now, he spends less than 10 minutes a day on the same tasks, and even better he only has one calendar open at a time and can be certain that the other will get automatically updated"

Through the Marketplace, customers can discover, deploy, and scale integrated solutions that extend athenaOne®, helping streamline workflows and improve clinical and financial performance. Sporo Health joins athenahealth's ecosystem of integrated solutions available to more than 170,000 clinicians on the athenaOne network.
